Dear Hiring Manager,

I am applying for the Process Automation Engineer (Celonis) role at Flix in Lisbon. I am excited by the opportunity to build production automations that connect business processes, enterprise systems, APIs, and customer outcomes at meaningful scale.

In my current role as Lead Developer at FlowSpace, I design and operate production workflows across CRM, booking, lead-capture, and customer-support processes. I have integrated external APIs, consolidated data across systems, and built AI-assisted processing tools that turn varied source material into structured, reviewable results. I use n8n, Postman, Playwright, Jira, GitHub, TypeScript, and Laravel in my day-to-day work, with a strong focus on dependable execution, validation, and clear documentation. I have also worked with SQL and database-oriented product logic when tracing data through workflows and checking results.

The role's focus on data integration, modelling, ETL, API calls, error handling, monitoring, and safe production ownership closely matches the way I approach automation. I have not worked hands-on with Celonis, PQL, Action Flows, or Process Orchestrator, so I would bring relevant automation and enterprise-integration experience while deliberately ramping on the Celonis platform. I am comfortable learning new tools, reverse-engineering existing workflows, and partnering with business and engineering stakeholders to make processes more reliable.

I am based in Venice, Italy, hold an EU Long Term Residence Permit, and am open to relocating to Lisbon. I would welcome the opportunity to discuss how my production automation and API-integration experience could support Flix's Customer Service automation team.

Regards,
Prabhavit Gupta
