Dear Hiring Manager,

I am applying for the AI Engineer (Generative AI) role at Fyld.

At FlowSpace, I built and own a production LLM extraction pipeline that processes broker documents in any format, PDF, website, photo, or spreadsheet, and drafts more than 900 structured workspace listings, with validation checks and human review before anything reaches the platform. I also built RAG backed support agents that answer customer questions against live platform data, using confidence scoring to escalate uncertain answers to a person, and evaluate retrieval quality as part of that loop. My day to day stack is Python and TypeScript, with Supabase and PostgreSQL as the data and vector search layer, and Next.js plus Laravel as the product I ship AI features into. I have working knowledge of Docker and Kubernetes for shipping these services.

Fyld's focus on GenAI systems that ship into real enterprise workflows, not experiments, is the kind of work I want more of.

I am based in Venice, Italy, ready to relocate to Porto. I hold Italian EU long-term resident status. I am not yet authorised to work in Portugal and would need the employer-side permit process, which I am ready to complete.

Regards,
Prabhavit Gupta
