Dear Hiring Manager,

I am applying for the Software Engineer role at GitKraken. I am drawn to the opportunity to work on developer tools that combine a thoughtful user experience with reliable systems and practical AI capabilities.

In my current role as Lead Developer at FlowSpace, I have helped scale a product from 2,000 to more than 4,500 users while overseeing its migration to Next.js and Laravel. I build and iterate on product features in TypeScript, integrate external APIs, and use Playwright, Postman, Jira, and GitHub to validate and ship changes. I have also built data-processing and AI-assisted workflows that ingest varied sources, produce structured results, and route them through human review. This work has strengthened my ability to turn ambiguous requirements into maintainable, testable software.

The role's React, Go, and PostgreSQL stack is a strong match for the direction of my engineering work. I bring current experience with React-based product development through Next.js, API integration, QA, and database-oriented product work, and I am ready to ramp quickly on Go in a production team. GitKraken's focus on reducing friction for developers is especially compelling to me because I enjoy building tools that make complex workflows clearer and more dependable.

I am based in Venice, Italy, hold an Italian EU Long Term Residence Permit, and am open to relocating to Alicante. I understand that work authorization and any sponsorship process for Spain would need to be assessed by GitKraken, and I am ready to complete the applicable employer-side process. I am available immediately and would welcome the opportunity to discuss how I could contribute to GitKraken.

Regards,
Prabhavit Gupta
