Dear GitLab Hiring Team,

I am writing to apply for the Forward Deployed Engineer, EMEA role. I want to be upfront that I have three years of professional experience, not staff-level tenure, and my production stack is TypeScript and Laravel rather than Ruby on Rails or Go. What I bring is real experience shipping AI-assisted, agentic systems into production and working directly embedded with the people who use them.

At FlowSpace, I took over a live workspace marketplace and automated its migration off a legacy stack onto Next.js and Laravel while the product stayed live, growing usage from 2,000 to 4,500 plus users. I built and still own an AI listing bot that turns a provider's brochure, in any format, into a drafted listing with a human in the loop, producing over 900 drafts, and I built support AI agents that answer customer queries from live platform data and escalate to a person when confidence is low, both running against real users, not as demos.

At UltraStrategy, I built the CV-parsing pipeline behind the platform: a user uploads a CV, the pipeline extracts the data with Affinda and scores how relevant the candidate is for specific role types, the result reaches the frontend, and the pipeline then generates a standardised Ultra CV using the Claude API. I built this with n8n and Eden AI, an agentic, AI-assisted pipeline from raw input to a delivered result.

I use Claude Code daily for AI-assisted development, and I am comfortable diagnosing issues across an API and data layer and turning what I find into a reusable pattern rather than a one-off fix.

I am authorised to work from Italy under Italian EU long-term resident status and can perform this EMEA remote role from there. I would welcome the opportunity to discuss whether my experience is a fit for the Forward Deployed Engineering team.

Regards,
Prabhavit Gupta
