Dear gravity9 hiring team,

I am applying for the Forward Deployed AI Engineer role in Poland. I have three years of professional experience building AI features that sit inside a live product and are used by real people, not proofs of concept that stop at a notebook.

At UltraStrategy I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific kinds of roles, the result is delivered to the frontend, and a standardised Ultra CV is then generated, using Affinda and the Claude API for the parsing and generation and n8n and Eden AI for the surrounding orchestration. That is the closest example I have to the data-engineering and model-in-production work this role is built around.

At FlowSpace I own an AI listing bot that takes a workspace provider's name and a brochure in any format and drafts the full listing with a human in the loop before it reaches the backend, with over 900 drafts produced, and I built support AI agents that answer customer queries from live platform data and escalate to a human on low confidence, the closest example I have to production agent design with a human-in-the-loop checkpoint.

I want to be direct about the gap. My production depth is in LLM pipelines and workflow automation with n8n, the Claude API and Affinda, not multi-agent orchestration frameworks like LangGraph or the Anthropic Agent SDK, and I have not worked with MongoDB or in a regulated healthcare or financial-services environment. I am applying because the underlying skill, agent and data pipelines that real users depend on, is the same skill, and I would be learning the frameworks fast rather than arriving with production depth in them.

I am authorised to work in Italy and would need the applicable employer-side permit or sponsorship process to work from Poland. I am ready to relocate and complete that process.

I would welcome the chance to talk through how I would approach a first client engagement.

Regards,
Prabhavit Gupta
