Dear HCLSoftware team,

I am writing to apply for the Forward Deployed Engineer role in your Incubation and Exploration portfolio. I have three years of professional experience across eight European companies, most of it spent turning a platform into a client-ready solution and staying on it through integration and adoption.

At FlowSpace, a live workspace marketplace, I took over the platform and automated its data migration off a legacy stack onto Next.js and Laravel, mapping the data model entity by entity and driving the cutover while the product stayed live and grew from 2,000 to 4,500 plus users. I shipped the OfficeRnD and Nexudus API integrations for automated bookings and built support AI agents that answer customer queries from live platform data and escalate to a person on low confidence, plus the CRM and GTM automations around lead capture and routing.

At UltraStrategy, I built a CV parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific roles, the result reaches the frontend, and a standardised Ultra CV is generated, using Affinda and the Claude API, with n8n and Eden AI behind the extraction tool itself.

I am comfortable building APIs and automations that connect a product to a client's existing systems, resolving issues under a client-driven deadline, and documenting what I built so a wider team can reuse it, which is the shape of work this role describes.

I am authorised to work in Italy under Italian EU long-term resident status, based in Venice and open to Rome.

I would welcome the opportunity to discuss how I could contribute to your Agentic AI Builder work.

Regards, Prabhavit Gupta
