Dear Hiring Team,

I am applying for the Software Engineer (Early Careers) role at Helsing in Munich, through the BSA2A route.

At FlowSpace, I took over a live workspace marketplace and drove the migration of its data and logic off a legacy stack onto Next.js and Laravel, mapping the old structure to the new one and choosing the migration path per entity while the product stayed live with real users, growing from 2,000 to over 4,500. I also shipped API integrations with OfficeRnD and Nexudus for automated bookings and built an AI listing bot that turns a brochure in any format into a structured listing with a human in the loop, over 900 drafts produced. That work taught me to reason carefully about system boundaries and trade-offs under real constraints, not just in a lab environment.

At Urlink, I worked as both project manager and developer, building the platform and its logic directly with the client and implementing automations to their requirements, end to end, from architecture decisions to delivery.

I read the note that Helsing's interviews are designed so engineers succeed on their own reasoning rather than relying on an LLM in the room, and that matches how I like to work through a hard technical problem myself before reaching for a tool.

I hold Italian EU long-term resident status. I am not currently authorised to work in Germany and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Munich and complete that process.

Regards,
Prabhavit Gupta
