Dear Hiring Manager,

I am applying for the Forward Deployed Engineer role at Heyra in Copenhagen.

At FlowSpace, I took over a live workspace marketplace and automated its data migration off a legacy stack onto Next.js and Laravel, driving the cutover while the product stayed live and growing the platform from 2,000 to over 4,500 users. I built and own an AI listing bot, over 900 drafts produced, and support AI agents that answer customer queries from live platform data and escalate to a person on low confidence, built with the Claude API, Claude Code, n8n and TypeScript. I worked directly with the internal team, an external agency and customers, staying with problems through the unglamorous adoption stage rather than handing off after launch.

At Urlink, I worked as project manager and AI-assisted developer, building the platform and its logic and implementing automations driven directly by client requirements, translating what the client needed into a working product with Next.js, Supabase and Netlify.

I want to be direct about fit. I have three years of professional experience across eight European companies. I have not worked in a formal management consulting practice, but my work at FlowSpace and Urlink has consistently meant embedding with a business, understanding where the real problem sits and staying through to a solution people actually use, which is the closest match I can offer to what you describe.

Denmark is not covered by the EU long-term residence mobility directive that comes with my Italian status, so I am not currently authorised to work there and would need an ordinary Danish employment permit or other qualifying immigration permission. I am ready to relocate to Copenhagen and complete that process.

Regards,
Prabhavit Gupta
