Dear Hypersolid team,

You say you do not want a resume, you want to see something real. Two things, then: github.com/prab-gupta/llm-doc-parser is a small tool I built out of curiosity that takes any document (PDF, web page, photo, spreadsheet) and returns structured JSON with confidence scores; and at FlowSpace (a London coworking marketplace) that idea grew into a production pipeline that has drafted 900+ workspace listings from operator brochures, with a human reviewing only the low-confidence fields.

The rest of my last two years looks like your job description in miniature. I built support agents that answer availability and pricing questions against live data and hand off to a person when unsure, ran integrations with booking systems (OfficeRnD, Nexudus) and CRMs, and spent a lot of time in rooms with operators reframing the question they arrived with. Stack: Python, TypeScript, Claude and OpenAI APIs, vector search, n8n, PostgreSQL, Docker. Claude Code is my daily tool, so I prototype fast and throw away what does not prove out.

I am based in Venice with an EU long-term residence permit and can relocate to Alkmaar; the Dutch work permit is an employer-side step that I am glad to walk through with you. Available immediately.

Regards,
Prabhavit Gupta
