Dear Hyra hiring team,

I am applying for the AI Software Engineer role at Hyra. I build applied AI products that turn business workflows into reliable software, with hands-on experience across LLM APIs, RAG, agentic orchestration, REST integrations, and full-stack delivery.

At FlowSpace, I built and operated production AI features for a live workspace marketplace. My current listing pipeline accepts brochures and source material in formats including PDF, web pages, photos, and spreadsheets, extracts structured data with LLMs, applies validation and human review, and sends approved results to the backend. It has produced more than 900 draft listings. I also built support agents that answer against live platform data and escalate to a person when confidence is low, plus integrations with OfficeRnD, Nexudus, CRM systems, and other APIs.

What attracts me to Hyra is the opportunity to work close to the product and make AI useful for real users. I am comfortable moving from an ambiguous product need to a tested implementation, reviewing model output critically, and iterating with feedback. My documented production stack includes TypeScript, Laravel, APIs, n8n, Supabase, and LLM/RAG workflows. Python is an active learning area that I am developing for AI engineering work. I also maintain a public example of document-to-structured-JSON work at github.com/prab-gupta/llm-doc-parser.

I am based in Venice, Italy, hold an EU Long Term Residence Permit, and am available immediately. I would welcome the opportunity to discuss how my applied AI and product engineering experience could contribute to Hyra.

Regards,
Prabhavit Gupta
