Dear Intelligenza Artificiale Spiegata Semplice hiring team,

I am applying for the Junior Full-Stack Developer role in Altamura. I build full-stack products with JavaScript, TypeScript, React, Next.js and Node, and I use AI tools as a normal part of my daily workflow rather than as a novelty, which fits a team built around AI Week and AI Play.

At Urlink, I built the platform and its logic with AI-assisted development on Next.js and Supabase, and implemented automations driven directly by client requirements, using GitHub, Netlify and bolt.new. I also acted as the point of contact on client requirements, translating what a non-technical client needed into working features.

At FlowSpace, I took over a live coworking marketplace and helped automate its migration off a legacy stack onto Next.js and Laravel, mapping the old structure to the new one and migrating data per entity while the product stayed live, growing the platform from 2,000 to 4,500 plus users. I also built an AI listing bot that turns a brochure in any format into a drafted listing with a human in the loop, and support agents that answer customer queries from live platform data and escalate on low confidence, alongside OfficeRnD and Nexudus API integrations.

Both roles asked me to take a feature from idea to deployment with real users on the other end, which is exactly the loop this role describes. I am based in Venice, authorised to work in Italy with no sponsorship needed, and available to start within two weeks of an offer.

Regards,
Prabhavit Gupta
