Dear Inetum Hiring Team,

I am writing to apply for the RPA Automation Developer role in Lisbon. To be upfront, my three years of automation work have been built on n8n and custom API/JavaScript workflows rather than UiPath specifically, but the underlying job is the same: designing and debugging automated workflows, integrating REST APIs, and keeping a process running reliably once it is live, so I expect to be productive in UiPath Studio and Orchestrator quickly.

At FlowSpace, a live workspace marketplace, I built GTM automations for the sales funnel, including lead capture, enrichment and outbound routing, and developed the CRM integration behind automated lead consolidation, alongside OfficeRnD and Nexudus API integrations for automated bookings. That is the same shape of work your role describes: mapping a business process into a workflow, wiring it to the right systems, and handling the errors that come up once it runs unattended.

At UltraStrategy I built a CV-parsing pipeline with n8n and Eden AI: a user uploads a CV, the workflow extracts the data, scores the candidate against specific role types and hands the result to the frontend before a standardised CV is generated. At Get2Germany I integrated Google APIs into automation tools that find courses, internships and jobs, work that needed the same debugging and Git-based version control discipline an unattended workflow requires.

I hold Italian EU long-term resident status. I am not currently authorised to work in Portugal and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Lisbon and complete that process.

I would welcome the opportunity to discuss how I could contribute to Inetum.

Regards,
Prabhavit Gupta
