Dear Inriver team,

I am writing to apply for the Senior Forward Deployed Engineer role in Malmo. I want to be upfront: I have three years of professional experience, not the seven plus years the posting asks for. What I can offer instead is dense, shipped integration and migration work across eight European companies in that time, work that sits close to what a forward deployed engineer does at Inriver: connecting a platform to a customer's real, messy systems and owning the outcome.

At FlowSpace, a live workspace marketplace, I took over the platform and automated its data migration off a legacy stack onto Next.js and Laravel, mapping the data model entity by entity and choosing the migration path per entity, either API endpoints or CSV exports, while the product stayed live and grew from 2,000 to 4,500 plus users. I also shipped OfficeRnD and Nexudus API integrations for automated bookings, and CRM and GTM automations for lead capture, enrichment and routing.

At Get2Germany, I integrated Google APIs and built AI tools that find courses, internships and jobs for users, and optimised the underlying database, using n8n to orchestrate the automations.

I am comfortable being the person who owns an integration end to end, from the data model to the production rollout, and I use Claude and Claude Code as part of how I build and debug. I hold Italian EU long-term resident status. I am not currently authorised to work in Sweden and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process.

I would welcome the opportunity to discuss how I could contribute to your Malmo team.

Regards, Prabhavit Gupta
