Dear Intapp Hiring Team,

I am writing to apply for the Client Support Engineer role in Lisbon. I have spent the last three years as the person who owns an integration end to end once it is live, debugging the gap between what an API promises and what it actually returns, and I want to bring that same ownership to your Client Success and Support team.

At FlowSpace, I shipped and maintain the OfficeRnD and Nexudus API integrations that power automated bookings on the platform, and I built support AI agents that answer customer queries against live platform data and escalate to a person when confidence is low. When an integration misbehaves, I am the one tracing it through logs, API responses and configuration to separate a product defect from a data or environment issue, and communicating the fix back to the people relying on it.

At Clubee, I integrated the Clubee API across the whole frontend and ran unit testing and QA on new features, which meant working from tickets and reproduction steps through to a verified fix, the same discipline this role asks for around ticketing, SLA management and clear technical documentation.

My day-to-day toolkit is TypeScript, Node.js and REST APIs, with working knowledge of SQL through Supabase and Postgres. I have not used Microsoft SQL Server or .NET in production, but I pick up a new stack quickly and I am genuinely interested in using AI tools to make support work faster and more consistent, which is a habit rather than a checkbox for me.

I hold Italian EU Long Term Residence status. I am not currently authorised to work in Portugal and would need the applicable employer-side permit or sponsorship process; I am ready to relocate and complete that process for the Lisbon role.

I would welcome the opportunity to discuss how I could contribute to the Client Success and Support team.

Regards,
Prabhavit Gupta
