Dear Hiring Team,

I am applying for the Software Engineer III - Python role in the Employees Platform team in Dublin (requisition 210772788).

The role asks for someone who builds production services in Python or Node.js with React and TypeScript front ends, uses enterprise AI coding tools every day, and validates their output through tests and review. That is how I have worked for the past two and a half years. At FlowSpace, a London coworking marketplace, I built an AI listing pipeline that turns operator documents into validated records (900+ listings drafted, human review on low-confidence fields), support agents that answer against live data and escalate when unsure, and REST integrations with booking systems (OfficeRnD, Nexudus) and CRMs. I led the migration off a legacy stack onto Next.js and Laravel while the product stayed live, and I write Playwright and unit tests as part of every change. Claude Code is my primary development tool, and I treat its output the way your posting describes: reviewed, tested, and measured before it ships.

Working knowledge of Flask and FastAPI, Docker and Kubernetes, and GitHub Actions pipelines rounds out the stack. I hold an EU long-term residence permit (Italy); the Irish employment permit is an employer-side step I am glad to walk through. Available immediately, relocation to Dublin welcome.

Regards,
Prabhavit Gupta
