Dear Jaipur Robotics team,

I am writing to apply for the Forward Deployed Engineer role. I have three years of professional experience across eight European companies, mostly in software and AI automation delivered directly to clients. I do not come from a robotics or field hardware background, and I want to be upfront about that rather than overstate my fit, but the core of this role, taking a working system to a customer site and making sure it lands, is close to work I already do.

At FlowSpace, a live workspace marketplace, I took over the platform and drove its data migration off a legacy stack onto Next.js and Laravel while the product stayed live and grew from 2,000 to 4,500 plus users, working through issues as they came up on a system real users depended on. I also shipped the OfficeRnD and Nexudus API integrations that connect the platform to booking systems in the field, so I am used to debugging integrations against third-party systems I do not control.

At Get2Germany, I integrated Google APIs and built AI tools that find courses, internships and jobs, working hands-on with the technical configuration needed to get a system talking to external services correctly.

I am based in Italy and authorised to work here without sponsorship, and I am comfortable with frequent travel and hybrid, on-site work across Europe. I am a fast learner on new technical environments and would welcome the chance to bring that same close-to-the-problem approach to deploying your AI vision systems in the field.

Regards, Prabhavit Gupta
