Dear Hiring Manager,

I am applying for the Machine Learning Engineer role at Julius Baer in Madrid.

At FlowSpace, I built and own an AI listing bot that takes a workspace provider's brochure in any format and drafts a full structured listing with a human in the loop, over 900 drafts produced, and support AI agents that answer customer queries by grounding responses in live platform data and escalate to a human when their confidence is low. I built these with the Claude API, n8n for orchestration, and TypeScript, and I have iterated on prompts and escalation thresholds to keep outputs accurate and safe in production, on a live marketplace that grew from 2,000 to over 4,500 users.

At UltraStrategy, I built a CV-parsing pipeline where a user uploads a CV, the pipeline extracts the data with Affinda and the Claude API and assesses how relevant the candidate is for specific role types, and the result is delivered to the frontend before a standardised profile is generated with n8n and Eden AI. That project is the same shape as this role: taking a model output, grounding it in real data, and shipping it reliably to production.

My background is in applied LLM engineering, agents, orchestration and RAG-style grounding, rather than classical model training with TensorFlow or PyTorch. I would come in strongest on the agentic workflow, tool-calling and data-quality side of the role and build up the classical ML modelling side on the job.

I hold Italian EU long-term resident status. I am not currently authorised to work in Spain and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Madrid and complete that process.

Regards,
Prabhavit Gupta
