Dear Juna AI Team,

I am applying for the Forward Deployed Engineer role in Berlin. I am a full-stack and AI developer with three years of production experience across eight European companies, drawn to a role built around owning a customer problem end to end rather than shipping features in isolation.

At FlowSpace, a coworking marketplace I have led as developer since 2024, I built support AI agents that answer customer queries from live platform data and escalate to a human on low confidence, and an AI listing bot that turns a workspace provider's brochure, in any format, into a drafted listing with a human in the loop. I also automated the platform's migration onto Next.js and Laravel while it stayed live, mapping the old data structure entity by entity, and integrated OfficeRnD and Nexudus for automated bookings.

At UltraStrategy in France, I built a CV-parsing pipeline with n8n, Eden AI, Affinda and the Claude API. A user uploads a CV, the pipeline extracts the data and scores it against specific role types, and a standardised Ultra CV is generated and delivered to the frontend, the same pattern of turning messy real-world input into a working agent that this role asks for.

I do not come in with a senior title, but I have shipped across the stack, backend, integrations and frontend, on every project above, and I learn fast on unfamiliar ground. I am comfortable working on-site and travelling to customer sites.

I hold Italian EU long-term resident status. I am not currently authorised to work in Germany and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Berlin and complete that process.

Kind regards,
Prabhavit Gupta
