Dear KI performance Hiring Team,

I am writing to apply for the Forward Deployed Software Engineer role. I have three years of professional experience building complete solutions end to end, from frontend interfaces to backend services and AI enabled features, directly with customers.

At FlowSpace, a live workspace marketplace, I automated the platform's migration off a legacy stack onto Next.js and Laravel while the product stayed live, growing the user base from 2,000 to over 4,500, and I built an AI tool that turns a provider's brochure, in any format, into a drafted listing with a human in the loop, over 900 produced so far. I also shipped the OfficeRnD and Nexudus API integrations behind automated bookings.

At Urlink, I worked as both the developer and the project manager on an AI assisted platform build, turning client requirements directly into working features on Next.js and Supabase, deployed through Netlify and GitHub, and I implemented client driven automations on top of it. That end to end ownership, from the first conversation with the client to a shipped interface and backend, is the same shape of work this role describes.

I write in TypeScript and Python, and I am comfortable integrating LLM capabilities into working products, as I did with n8n, Eden AI, Affinda and the Claude API on UltraStrategy's CV parsing pipeline. I hold Italian EU long-term resident status and can work remotely from Italy; I would also be glad to work from Lisbon and complete the applicable employer-side permit process if the role requires it.

I would welcome the opportunity to discuss how I could contribute to KI performance's client delivery.

Regards,
Prabhavit Gupta
