Dear Keepit team,

I am applying for the AI Automation Engineer role in Krakow. Your focus on building agents for GTM and Finance connects directly with my experience turning operational workflows into integrations and AI-assisted processes. I am interested in the complete delivery cycle, from understanding the business need to testing the resulting behaviour with users.

At FlowSpace, I built CRM and GTM automations for lead capture, enrichment, routing and outbound workflows. I also built an AI listing pipeline that processes brochures, websites and other material into draft listings for human review. It has produced more than 900 draft listing records. Support agents using live platform data and confidence-based human escalation provide another example of connecting AI to a working product. Alongside that work, I helped migrate the marketplace to Next.js and Laravel as it grew from 2,000 to more than 4,500 users.

My strongest delivery experience is in TypeScript, n8n, LLM APIs and third-party integrations, with Python among my development skills. I also use Claude Code. Keepit's emphasis on reliable, monitored automation is a useful next step for this background. I would bring this business-automation experience while developing further depth in MCP servers, local-model orchestration and the agent harness around them.

I am based in Venice on CET/CEST, available immediately and ready to relocate to Krakow. I hold Italian EU long-term resident status. I am not currently authorised to work in Poland and would need the applicable employer-side permit or sponsorship process.

Regards,
Prabhavit Gupta
