Dear Hiring Manager,

I am applying for the Full-Stack Engineer role on the Bioma team.

At FlowSpace, I own full-stack development end to end. I helped lead the migration of a live marketplace platform off its legacy stack onto Next.js and Laravel, working through the data model, the migration plan per entity, and the cutover while the product stayed live, and I have shipped full-stack features across that platform since, growing it from 2,000 to 4,500 plus users. I built AI agents that answer customer queries against live data and escalate to a human when confidence is low, and I use Claude Code and other AI assisted development tools daily to move faster through implementation and debugging, close to how this role expects the stack to be used. I also integrated third party APIs, OfficeRnD and Nexudus for bookings, and built CRM and lead capture automations, the kind of business logic and integration work this role covers.

What draws me to Bioma is the chance to own that same full stack surface, architecture through deployment, on a product with real users and a fast measure and iterate loop, rather than a narrow slice of it.

I am based in Venice, Italy, hold an Italian EU long term residence permit, and am ready to relocate to Riga or Vilnius. I am not currently authorised to work in Latvia and would need the employer side permit or sponsorship process, which I am ready to start immediately.

Regards,
Prabhavit Gupta
