Dear Kinaxis team,

I am writing to apply for the Forward Deployed Engineer I role on your new agentic deployment team. I use Claude Code daily as part of my own development practice, and I have three years of experience turning open-ended customer problems into shipped, production AI systems, which is the core of what this role asks for.

At FlowSpace, I took over a live workspace marketplace and automated its data migration off a legacy stack onto Next.js and Laravel while the product stayed live and grew from 2,000 to 4,500 plus users. I built and own an AI listing bot that takes a brochure in any format and drafts a full listing with a human in the loop using the Claude API and TypeScript, and I built support AI agents that answer customer queries from live platform data and escalate to a person on low confidence, a pattern close to the tool-use and human-in-the-loop work this role describes.

At UltraStrategy, I built a CV parsing pipeline integrated into the platform. A user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific roles, the result is delivered to the frontend, and a standardised Ultra CV is then generated, using Affinda and the Claude API for the parsing and generation, plus n8n and Eden AI for the extraction tool itself.

I am comfortable working directly with customer teams, carrying a problem from a rough business question to a working solution, and abstracting what I learn into something reusable. I hold Italian EU long-term resident status and can confirm my precise authorisation once the role's actual employing country is confirmed, since the posting text and its listed location differ; I am ready to relocate or arrange the applicable permit as needed, and I am glad to travel as the role requires.

I would welcome the opportunity to discuss how I could contribute to the Kinaxis Forward Deployed Engineers team.

Regards,
Prabhavit Gupta
