Dear Kingo hiring team,

I am applying for the AI / Forward Deployed Engineer role in Sofia. I work directly with live systems and real customer data to turn business problems into working AI solutions, then own the result in production.

At FlowSpace, I built AI features for a live coworking marketplace end to end. I own an AI listing bot that reads a workspace provider's brochure in any format (PDF, website, photo or spreadsheet) and drafts a structured listing with a human in the loop, producing over 900 drafts. I also built support agents that answer customer queries from live platform data and escalate to a human on low confidence, plus OfficeRnD and Nexudus integrations and CRM and GTM automations. Stack: TypeScript, Next.js, Node.js, Laravel, n8n and Claude Code.

At UltraStrategy, I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific roles, the result reaches the frontend, and a standardised profile is generated. I used Affinda and the Claude API for the parsing and generation, and n8n and Eden AI for the extraction tool itself.

Both roles required designing a solution around an ambiguous, customer-specific workflow and shipping it into daily use, which is close to what Kingo's forward deployed work asks for.

I am based in Venice, Italy, hold Italian EU long term resident status, and am ready to relocate to Sofia. I am not currently authorised to work in Bulgaria and would need the employer side permit or sponsorship process, which I am ready to start immediately.

Regards,
Prabhavit Gupta
