Dear Kleio hiring team,

I am applying for the Forward Deployed Engineer role in Paris. I work directly with live systems and real client data, turning ambiguous operational problems into production features, then support them once they are live.

At FlowSpace, I took over a live coworking marketplace and automated its migration off a legacy stack onto Next.js and Laravel, mapping the old data model to the new one and driving the cutover while the product stayed live, growing the platform from 2,000 to 4,500+ users. I shipped OfficeRnD and Nexudus API integrations for automated bookings, plus CRM and GTM automations for lead capture, enrichment and routing, and built support AI agents that answer customer queries from live platform data and escalate to a human on low confidence. Stack: TypeScript, Next.js, Node.js, Laravel, n8n and the Claude API.

At Urlink, I built the platform and its logic with AI-assisted development and implemented automations driven directly by client requirements, acting as project manager on those requirements. Stack: Next.js, Supabase, Netlify, GitHub, bolt.new.

Both roles meant translating a client's requirements into a working technical solution, integrating with the systems already in place, and owning the result end to end, which is close to what this role asks for.

I am based in Venice, Italy. I hold Italian EU long-term resident status. I am not currently authorised to work in France and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Paris and complete that process.

Regards,
Prabhavit Gupta
