Dear Kramp Hiring Team,

I am writing to apply for the AI Automation & Analytics Engineer role on the SSC Excellence & RPA Team. I want to answer your "before you apply" question directly, since it is the clearest way to show what I would bring to this role.

The solution: at FlowSpace, a live workspace marketplace, listings from workspace providers arrived as brochures in any format, PDF, website, photo or spreadsheet, and turning them into structured listings by hand did not scale. I built an AI listing bot that takes that raw input, extracts and structures the data with the Claude API, and drafts the full listing with a human in the loop before it is pushed to the backend. The business problem was throughput: listings were the bottleneck to platform growth. The architecture is n8n orchestrating the pipeline, TypeScript for the integration layer, and the Claude API for extraction and drafting. It has been running in production since I built it and has produced over 900 draft listings used by real operators on a platform that grew from 2,000 to 4,500+ users. I also built support AI agents on the same platform that answer customer queries from live data and escalate to a person when confidence is low, so the pattern of shipping an AI solution that a business actually runs on, not a proof of concept, is one I have repeated more than once.

At UltraStrategy, I built a similar kind of intelligent document processing tool: a CV-parsing pipeline where a user uploads a CV, the pipeline extracts the data and scores how relevant that candidate is for specific types of roles, and the result is delivered to the frontend before generating a standardised profile. I built this with n8n and Eden AI, integrating multiple systems through APIs in the same way this role asks for.

I work daily in Python and SQL, and I am comfortable integrating multiple systems through APIs, which your must-have list centres on. I have not used Google BigQuery or Tableau specifically, and I say that plainly rather than imply otherwise; my analytics experience is on Supabase and PostgreSQL, and I pick up a new data platform quickly once the underlying SQL is the same. I have not used UiPath either, but I understand how RPA and AI agents complement each other from building exactly that pairing with n8n and LLMs.

I hold Italian EU Long Term Residence status. I am not currently authorised to work in Poland and would need the applicable employer-side permit or sponsorship process; I am ready to complete that process for this role.

I would welcome the opportunity to talk through how I could contribute to the SSC Excellence & RPA Team.

Regards,
Prabhavit Gupta
