Dear Kuehne+Nagel hiring team,

I am writing to apply for the QA Automation Engineer role on SALOG in Wroclaw. Test automation with Playwright and TypeScript is exactly the pairing I already work with, and I would welcome the chance to help build that transition out for a mission-critical logistics application.

At Clubee, I worked as a developer and QA on the platform's frontend, running unit testing and quality assurance for new features while integrating the Clubee API across the product. That work taught me to read a business scenario, identify what could break it, and turn that into test coverage that catches the failure before release.

At FlowSpace, I use Playwright for browser automation as part of my day-to-day development work, alongside TypeScript, Laravel and Postman for API validation. I also led the automated migration of the platform's data off a legacy stack onto Next.js and Laravel while the product stayed live, which meant validating that business-critical flows kept working correctly through a full architecture change, and integrated OfficeRnD and Nexudus through their APIs for automated bookings.

I have not worked with Cucumber, Gherkin, Selenium or AssertJ directly, so I want to be upfront about that rather than overstate it. What I bring is hands-on Playwright and TypeScript experience, a QA background from Clubee, and the ability to pick up a team's existing framework and conventions quickly.

I hold an Italian EU Long Term Residence Permit. I am not currently authorised to work in Poland and would need the applicable employer-side permit or sponsorship process; I am ready to relocate to Wroclaw and complete that process. I would welcome the opportunity to discuss how I could contribute to the SALOG team.

Regards,
Prabhavit Gupta
