Dear Lexroom hiring team,

I am writing to apply for the Backend Engineer role in Milan. I build backend services and API integrations, and I bring practical experience layering LLM capabilities on top of a product, which matches the direction of your legal AI platform.

At FlowSpace, a workspace marketplace, I helped migrate the platform onto a coded Next.js and Laravel stack, working through the backend architecture entity by entity while the product stayed live. I also built the integrations with OfficeRnD and Nexudus for automated bookings, and an AI tool that processes and scrapes data to expand the listings on the platform. Day to day I worked with Laravel, TypeScript, Postman and Git.

At UltraStrategy, I built a CV parsing pipeline integrated into the platform. A user uploads a CV, the pipeline extracts the data with Affinda and the Claude API and scores how relevant the candidate is for specific role types, the result is shown in the frontend, and the pipeline then generates a standardised Ultra CV. I also built the platform serving the different user profiles, and separately, at Get2Germany, I integrated Google APIs and worked on database optimisation for the platform.

I am comfortable moving between backend architecture, database work and the LLM integration layer, and I hold myself to the same standard of code review, testing and clear API contracts that your team values. I am based in Venice, hold an Italian EU Long Term Residence Permit, and am available for the hybrid Milan role.

I would welcome the opportunity to discuss how I could contribute to the Lexroom engineering team.

Regards,
Prabhavit Gupta
