Dear Lio team,

I am applying for the Sales Engineer role in Munich.

At FlowSpace (coworking marketplace, London) my job for the last two years was exactly the loop this role describes: understand what an operator or a customer needs, build a working version fast, demo it, and turn the feedback into production software. I built the LLM pipeline that turns any operator brochure (PDF, website, photo, spreadsheet) into a validated listing after human review, 900+ listings so far, the RAG support agents that answer availability and pricing questions from live data and escalate to a person when confidence is low, and the OfficeRnD and Nexudus API integrations that connect the marketplace to the systems operators already run. Most of that work started as a prototype shown to a real user the same week.

Lio is doing for procurement what I have been doing for a smaller market: putting AI agents inside enterprise workflows and system landscapes where the customer expects working software, not slides. I am comfortable presenting technical concepts to engineers, IT and senior stakeholders, I use Claude Code daily to move from requirement to prototype in hours, and I enjoy the cross-discipline work with Sales, Product and Engineering that this role sits in.

Logistics: I am based in Venice, Italy, hold an EU long-term residence permit and can start immediately. Working from Munich with weekly customer travel is fine, and I am ready to relocate. The permit does not by itself grant German work rights, so an employer-side work permit application would be needed; I have gone through this process before and it is straightforward for a full-time hire. English is my working language (C1). I do not speak German yet and would commit to learning it, since customer conversations in Germany will eventually need it.

A runnable sample of how I build: github.com/prab-gupta/llm-doc-parser. CV attached.

Regards,
Prabhavit Gupta
