Dear Lithosquare team,

I am writing to apply for the Forward Deployed Engineer role. I have three years of experience sitting between a technical platform and the people who need its output to be right, turning messy real-world data into something a non-technical audience can trust and act on.

At UltraStrategy, I built a CV parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific roles, the result is delivered to the frontend, and a standardised Ultra CV is generated, using Affinda and the Claude API for the parsing and generation and n8n and Eden AI for the extraction tool itself. That work was about making an AI pipeline hold up against real, inconsistent source documents, which is close to what turning raw geology data into insight asks for.

At FlowSpace, I built and own an AI listing bot that takes a brochure from a workspace provider in any format, PDF, website, photo or spreadsheet, and drafts a full structured listing with a human in the loop, with over 900 listings produced this way. I have also been the person explaining a platform to non-technical stakeholders directly, running through what it does and why an output looks the way it does.

I do not have a geology or geospatial background, and I am not going to pretend otherwise. What I bring is genuine comfort applying AI and LLM tooling to a domain I learn on the job, and experience being the technical face of a product in front of people who are not engineers. I am open to relocating to Paris and comfortable with the flexible remote policy the role describes.

I would welcome the opportunity to discuss how I could contribute to Lithosquare's FDE team.

Regards,
Prabhavit Gupta
