Dear Hiring Manager,

I am applying for the Forward Deployed Engineer role at LumApps. Embedding with a client, mapping their workflows, and shipping a working AI agent fast is close to what I already do.

At FlowSpace, a coworking marketplace, I built and own an LLM extraction pipeline that turns operator brochures in any format into validated listings after human review, 900+ listings drafted so far. I also built RAG-backed support agents that answer against live platform data and escalate to a person on low confidence, and shipped OfficeRnD and Nexudus API integrations connecting booking systems operators already run into the live product. That work ran the full loop from customer discovery through rollout, on Next.js, TypeScript, Node.js and Python.

LumApps' move into deploying agents and micro-apps directly inside enterprise systems like SAP, Workday and ServiceNow is the integration surface I want to keep working on.

I am based in Venice, Italy, hold an Italian EU long-term residence permit, and am open to relocating to Lyon or Paris, or discussing remote. For a role based in France I would need the employer-side permit process, which I am ready to complete. My French is at a beginner level.

Regards,
Prabhavit Gupta
