Dear MAU / AI-LAB hiring team,

I am applying for the AI Full Stack Developer role. A Next.js frontend, a TypeScript Node backend, and AI agents built with the Claude SDK are close to the AI product work I have been doing over the past three years.

At FlowSpace, I am the lead developer on a live coworking marketplace. I automated its migration off a legacy stack onto Next.js, Laravel and Supabase, mapping the old data structure to the new one, choosing the migration path per entity (API endpoints or CSV exports), and driving the live cutover; the platform grew from 2,000 to over 4,500 users. I also built an AI listing bot on the Claude API and n8n that turns a workspace brochure of any format into a drafted listing with a human in the loop.

At UltraStrategy, I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data with Affinda and the Claude API and scores how relevant that candidate is for specific role types, the result is shown in the frontend, and a standardised Ultra CV is then generated.

At Urlink I built a Next.js and Supabase platform end to end with AI-assisted development and implemented client-driven automations, as project manager on requirements.

I hold Italian EU long-term resident status and am not yet authorised to work in Spain; the employer would need to file the applicable permit, and I am ready to start immediately. I am equally comfortable relocating to Barcelona or working fully remote.

Regards,
Prabhavit Gupta
