Dear Hiring Manager,

I am applying for the Platform AI Engineer, Market & Patient Access role at MSD in Prague.

At FlowSpace, I built and shipped the AI layer of a live product end to end. I built an LLM extraction pipeline that has drafted over 900 listing records for human review, turning a raw brochure or website into structured, validated data. I built RAG-backed support agents that answer against live platform data, escalate to a human on low confidence, and are evaluated against expected answers. My stack is TypeScript, Next.js and Node, with Python for the LLM and automation layer, Supabase/PostgreSQL for data, plus OfficeRnD and Nexudus API integrations. Most of what I build is an internal tool for the operations team running the business, so I know the pattern this role asks for: taking a delivery squad's bottleneck and turning it into a working AI tool people actually use.

MSD's scale gives that same pattern a much bigger surface, at a biopharma delivery organisation serious about building it properly.

I am based in Venice, Italy, hold an EU Long Term Residence Permit, and am ready to relocate to Prague. I do not currently hold Czech work authorisation and would need the employer-side permit process.

Regards,
Prabhavit Gupta
