Dear Hiring Manager,

I am applying for the Software Engineer, AI & Data role at A.P. Moller - Maersk in Copenhagen.

At FlowSpace, I own the backend and AI layer of a live marketplace end to end: TypeScript, Next.js and Node.js on top of a Laravel and Supabase/PostgreSQL backend, with OfficeRnD and Nexudus booking API integrations. My core project is an AI pipeline that reads a listing brochure in any format, PDF, website or spreadsheet, and drafts a structured, review ready listing with an LLM, producing over 900 draft listings with a human in the loop before publish. I also built support agents that answer on live platform data and escalate on low confidence, running in production, not as a demo.

That mix, data pipelines feeding AI applications and production ownership, is close to what this role asks for. Maersk's scale, turning global logistics data into decisions in real time, is a bigger version of the problem I already work on.

I am based in Venice, Italy, and ready to relocate to Copenhagen. I hold Italian EU long-term resident status, which does not extend automatically to Denmark; I would need the employer-side work permit process, and I am ready to complete it.

Regards,
Prabhavit Gupta
