Dear Mainloop team,

I am applying for the Forward Deployed Engineer role in Barcelona. Your emphasis on understanding how a business actually operates, reusing existing software and proving a useful MVP matches the work I enjoy: translating operational needs into working applications with the people who use them.

At FlowSpace, I helped migrate a live workspace marketplace from a legacy stack to Next.js and Laravel. This meant understanding the existing product, mapping data models, choosing API or CSV migration paths and coordinating delivery with an internal team and an external agency. The platform grew from 2,000 to more than 4,500 users. I also built an AI listing pipeline that turns brochures, websites and other source material into draft listings for human review. The pipeline has produced more than 900 draft listing records.

My work combines TypeScript, Next.js, Laravel, n8n and Claude Code with API integrations and customer issue resolution. At Urlink, I worked from client requirements as both project manager and AI-assisted developer. Mainloop's split between discovery, iterative prototypes and a deliberate handover appeals to me. I would bring experience investigating an existing workflow, connecting its systems and working with stakeholders to refine what should be built.

I am based in Venice on CET/CEST and available immediately. I am ready to relocate to Barcelona and travel for projects. I hold Italian EU long-term resident status, but I am not currently authorised to work in Spain and would need the applicable employer-side permit or sponsorship process.

Regards,
Prabhavit Gupta
