Dear Hiring Manager,

I am applying for the Product Manager role on the Data & Services team in Milan.

At FlowSpace, a workspace marketplace, I own product end to end. I translate business and customer requirements into shipped features, scaled the platform from 2,000 to 4,500 plus users through iterative product development, and act as the connector between engineering, an external agency and internal stakeholders to keep delivery aligned with commercial goals. I led the migration of the platform off its legacy stack onto a coded Next.js and Laravel architecture, mapping the data model per entity and driving the cutover while the product stayed live, balancing technical constraints against product direction the way data products need. I built a production AI listing pipeline that turns unstructured broker material into over 900 structured listing records with a human reviewer in the loop, plus support agents that answer customer queries against live platform data. On the commercial side, I built CRM integrations and automations for lead capture, enrichment and outbound, working directly with the sales funnel, close to how Data & Services products serve financial institutions, retailers and other commercial customers.

I am based in Venice and hold Italian EU long term residence, so I am authorised to work in Italy without sponsorship or a permit. I would welcome the chance to bring this cross-functional, data-driven product experience to Mastercard.

Regards,
Prabhavit Gupta
