Dear Mática Partners team,

I am writing to apply for the AI Engineer role on your Retail project. I understand the working language on this project is fully English, so I am applying in English even though the posting is in Spanish. I am a full-stack and AI developer with three continuous years across eight European companies, regularly working with Python and LLM APIs to take GenAI features from design through to production.

At UltraStrategy I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant that candidate is for specific types of roles, the result is delivered to the frontend, and the pipeline then generates a standardised Ultra CV. The parsing and generation steps used Affinda and the Claude API, orchestrated with n8n and Eden AI, the same kind of LLM-API and pipeline work your team runs for agents and prompts.

At FlowSpace I built and own an AI listing bot that takes a workspace provider's brochure in any format (PDF, website, photo or spreadsheet) and drafts a full listing with a human in the loop before it is sent to the backend through API endpoints, plus support AI agents that answer customer queries from live platform data, backed by Supabase, and escalate to a person on low confidence, the same retrieval-and-reasoning pattern behind a production RAG system.

I hold Italian EU long-term resident status and I am authorised to work from Italy; I can perform this role remotely from Italy on the project's English-language track, and I am happy to confirm whether the engagement would run as an Italian employment or contractor arrangement. I am available to start on short notice and welcome the chance to discuss the role further.

Kind regards,
Prabhavit Gupta
