Dear Max Mara Fashion Group hiring team,

I am applying for the Software Engineer role in Reggio nell'Emilia. I take a solution from requirements through design, development, prototyping and documentation to support, and I build that work into modern LLM-powered workflows rather than treating AI as a separate tool.

At FlowSpace, I took over a live coworking marketplace and helped automate its migration off a legacy stack onto Next.js and Laravel, mapping the old structure to the new one and choosing the migration path per entity while the product stayed live, growing the platform from 2,000 to 4,500 plus users. I built an AI listing bot that turns a provider's brochure in any format into a drafted listing with a human in the loop, producing over 900 drafts, plus OfficeRnD and Nexudus API integrations for automated bookings and CRM and GTM automations, all documented for the wider team.

At Urlink, I built the platform and its logic with AI-assisted development on Next.js and Supabase, and implemented automations driven directly by client requirements, using GitHub, Netlify and bolt.new. I also translated non-technical client requirements into working features as the point of contact on the project.

Both roles asked me to own a solution end to end, from understanding what internal or external users needed to shipping and documenting the result, which is close to the loop this role describes. I am based in Venice, authorised to work in Italy with no sponsorship needed, hold professional English at C1, and am available to start within two weeks of an offer.

Regards,
Prabhavit Gupta
