Dear Metheion Team,

I am applying for the Full-Stack Edge AI Engineer role in Leuven. I am a full-stack and AI developer with three years of production experience across eight European companies, and I am drawn to a role that sits between technical delivery and the people actually using the product, backed by real infrastructure work rather than a demo.

At FlowSpace, a coworking marketplace I have led as developer since 2024, I built and now own an AI listing bot that turns a workspace provider's brochure, in any format, into a drafted listing with a human in the loop, and support AI agents that answer customer queries from live platform data and escalate to a human on low confidence. I also automated the platform's migration to Next.js and Laravel while it stayed live, and was the point of contact between our internal team and an external agency, the kind of bridging role this position asks for between artistic and engineering stakeholders.

At Urlink in Barcelona, I built the platform and its logic with AI-assisted development and implemented client-driven automations on Next.js and Supabase, working directly as project manager on client requirements, so I am used to translating a stakeholder's brief into shipped software under a fast-moving scope.

At Clubee I integrated a partner API across the frontend and ran unit testing and QA on new features, the same QA discipline this role asks for around automated testing.

I hold Italian EU long-term resident status. I am not currently authorised to work in Belgium and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process.

Kind regards,
Prabhavit Gupta
