Dear Mirakl Hiring Team,

I am applying for the AI Engineer role at Mirakl Labs, based in Paris or Bordeaux.

At UltraStrategy I built a CV parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data with Affinda and assesses how relevant the candidate is for specific role types, the result reaches the frontend, and the pipeline then generates a standardised Ultra CV. The extraction layer was orchestrated with n8n and Eden AI, and the generation step ran on the Claude API, the kind of multi-step, tool-connected pipeline your team is scaling into agentic commerce.

At FlowSpace I built and operate support AI agents that answer customer queries from live platform data and escalate to a human on low confidence, alongside OfficeRnD and Nexudus API integrations for automated bookings and n8n driven CRM and GTM automations. I also drove the automated migration of the platform onto Next.js and Laravel while it stayed live, taking it from 2,000 to 4,500+ users.

Claude Code is part of my daily workflow, Python is a core language for me, and I have working knowledge of LangChain, MCP and vector retrieval, plus Docker, Kubernetes and AWS for packaging and deploying services, though not yet at daily or production depth.

I have three years of hands on delivery across eight European companies, most of it spent owning a system end to end. I hold Italian EU long term resident status, am not currently authorised to work in France, and would need the applicable employer side permit or sponsorship process. I am open to relocating to either Paris or Bordeaux and would welcome the chance to discuss the role.

Regards,
Prabhavit Gupta
