Dear Hiring Manager,

I am applying for the Software Development Engineer role in Genoa. Industrial and SCADA software is a good match for the kind of work I already do, shipping features that have to keep working when the underlying system is live and unforgiving.

At FlowSpace I built full-stack product features end to end, Next.js and TypeScript on the frontend, Node.js and Laravel on the backend, with a Postgres database layer. I use Python for automation and LLM pipelines, including a document-to-JSON extraction tool and workflow automations built with n8n. I wrote Playwright tests to keep releases from breaking live traffic, and maintained OfficeRnD and Nexudus API integrations that power real bookings for a platform I helped scale from 2,000 to 4,500+ users.

I am based in Venice and authorised to work in Italy under my Italian EU long-term residence status, no sponsorship needed. I can be in Genoa for hybrid days and am comfortable with regular travel to the office. My Italian is beginner level and improving through daily use.

Regards,
Prabhavit Gupta
