Dear Hiring Manager,

I am applying for the Forward Deployment Engineer, AI Specialist role in Paris.

At FlowSpace, I took over a live workspace marketplace and automated its data migration off a legacy stack onto Next.js and Laravel. I mapped the old data structure to the new one, chose the migration path per entity (API endpoints or CSV exports), and drove the cutover while the product stayed live, growing the platform from 2,000 to over 4,500 users. On top of that migration I built and own an AI listing bot that takes a workspace provider's brochure in any format and drafts a full structured listing with a human in the loop, over 900 drafts produced, plus OfficeRnD and Nexudus API integrations for automated bookings and CRM and GTM automations for lead capture and routing. That is the same shape of work this role describes: assess an existing data ecosystem, design the integration and migration path entity by entity, and ship something production-ready rather than a one-off proof of concept.

At Get2Germany, I integrated Google APIs to track platform activity, built AI automation tools with n8n that surfaced courses, internships and jobs for users, and optimised the underlying database. That project was API-driven end to end, from data source to the automation layer that acted on it, which is the same orchestration-first approach this role asks for.

I have three years of professional experience across eight European companies, most of it as an embedded, client-facing developer working directly with non-technical stakeholders and business teams rather than inside a large in-house engineering org. I am comfortable moving between technologies and explaining technical trade-offs to non-technical stakeholders, and I lean on AI-assisted development day to day to move faster without cutting corners on quality.

I hold Italian EU long-term resident status. I am not currently authorised to work in France and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process.

Regards,
Prabhavit Gupta
