Dear Nadara Hiring Team,

I am applying for the AI Engineer role based in Milan. I have three years of professional experience building and shipping AI powered automation and agent systems in production, and I want to bring that same discipline to Nadara's AI transformation programme.

At UltraStrategy, I built a CV parsing and assessment pipeline integrated into the platform. A user uploads a CV, the pipeline extracts the data with Affinda and the Claude API, scores how relevant the candidate is for specific role types, delivers the result to the frontend, and generates a standardised Ultra CV. I also built the platform that serves different user profiles.

At FlowSpace, I led the build of support AI agents that answer customer queries against live platform data and escalate to a person on low confidence, alongside an AI listing bot that turns brochures in any format into drafted listings with a human in the loop, now over 900 produced. I also shipped OfficeRnD and Nexudus API integrations and CRM and GTM automations, and drove the migration of the platform onto Next.js and Laravel while it stayed live, scaling it from 2,000 to 4,500 plus users.

At Get2Germany, I integrated Google APIs and built AI tools that find courses, internships and jobs, working directly with the underlying data pipelines.

I hold Italian EU long term resident status and am authorised to work in Italy without sponsorship. I am based in Venice and available for hybrid work in Milan. I would welcome the chance to bring this production AI and automation experience to Nadara.

Regards,
Prabhavit Gupta
