Dear Hiring Manager,

I am applying for the Fullstack Developer role at Navigraph.

At FlowSpace, a workspace marketplace, I work as lead developer building and shipping features across the full stack: a Next.js and TypeScript frontend, a Node.js and Laravel backend, and Supabase/PostgreSQL for data. I integrated OfficeRnD and Nexudus APIs for automated bookings, use Playwright for testing, and built an LLM-driven pipeline that has drafted over 900 listings from documents in mixed formats, with a human in the review loop. I helped scale the platform from 2,000 to 4,500+ users and led its migration off a legacy stack onto the coded Next.js and Laravel stack it runs on now.

A consumer product with 1.7 million users and a stack close to what I already ship, TypeScript, Node.js, and React, is the kind of role I want next: real-time data, APIs for third-party developers, and a small team where a fullstack developer owns real surface area.

I am based in Venice, Italy, and hold Italian EU long-term resident status. I am not currently authorised to work in Sweden and would need the employer-side permit process, and I am ready to relocate to Stockholm and complete it.

Regards,
Prabhavit Gupta
