Dear Hiring Manager,

I am applying for the Forward Deployed Engineer role in Italy.

At FlowSpace, a workspace marketplace platform, I work directly with the business, turning what stakeholders need into shipped software. I built the OfficeRnD and Nexudus API integrations that keep partner booking data in sync, and I drove an end to end migration of the platform onto Next.js and Laravel while it stayed live, mapping the old data structure to the new one and moving each entity across through API endpoints or CSV exports. The platform grew from 2,000 to 4,500+ users over that period. I also built and operate a RAG based support agent that answers customer questions from live platform data and escalates to a person on low confidence, the kind of agentic system this role is built around.

At UltraStrategy, I led a CV parsing pipeline built on Affinda and the Claude API: a user uploads a CV, the pipeline extracts the data, scores their fit for specific roles, and delivers a standardised Ultra CV to the frontend. At Urlink I built a client platform end to end with AI assisted development and implemented automations driven by client requirements as the point of contact on scope.

I have three years of hands on delivery across eight companies, most of it spent owning a system from client conversation through to production. That is why a forward deployed seat fits: I like sitting close to the client, building the thing myself, and iterating until it works in their environment. I am based in Venice, authorised to work from Italy, and ready to travel to client sites across Europe.

Regards,
Prabhavit Gupta
