Dear Neural Frames team,

I am writing to apply for the Product Engineer (Growth) role. I am a full-stack developer with three continuous years across eight European companies, shipping production features end to end and using AI tools as a genuine part of how I build, not as a shortcut around understanding the work.

At FlowSpace I took over a live workspace marketplace and automated its migration off a legacy stack onto Next.js and Laravel while the product stayed live, growing the platform from 2,000 to 4,500+ users. I also built and own an AI listing bot: give it a workspace provider's brochure in any format and it drafts the full listing with a human in the loop before it reaches the backend through API endpoints, a pipeline that turned a slow manual step into a fast, repeatable one and directly grew the number of live listings, the same kind of lever-finding you describe for marketing pages and free tools.

At Urlink I worked as project manager and AI-assisted developer, building the platform and its logic with Next.js and Supabase and implementing automations driven directly by client requirements, translating stakeholder asks into shipped product changes on my own.

I hold Italian EU long-term resident status. I am not currently authorised to work in Germany and would need the applicable employer-side permit or sponsorship process, and I am ready to relocate to Berlin and work on-site to complete it. I am available to start on short notice and would welcome the chance to discuss the role further.

Kind regards,
Prabhavit Gupta
