Dear NewRocket team,

I am writing to apply for the Forward Deployed AI Engineer role serving your Anthropic partnership in the Netherlands and Western Europe. I build directly on Claude and the Claude API in my daily work, and I have three years of experience turning business requirements into production AI systems for customers, which is the core of this role.

At UltraStrategy, I built a CV parsing pipeline integrated into the platform. A user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific roles, the result is delivered to the frontend, and a standardised Ultra CV is then generated, using Affinda and the Claude API for the parsing and generation, plus n8n and Eden AI for the extraction tool itself.

At FlowSpace, I took over a live workspace marketplace and automated its data migration off a legacy stack onto Next.js and Laravel while the product stayed live and grew from 2,000 to 4,500 plus users. I built and own an AI listing bot that drafts full listings from a brochure in any format with a human in the loop, using the Claude API and TypeScript, and I built support AI agents that answer customer queries from live platform data and escalate to a person on low confidence, the kind of grounded, human in the loop pattern this role's AI Foundry work calls for.

I use Claude Code daily and I am comfortable working directly with customer teams to translate real business problems into deployed, production ready solutions. I hold Italian EU long-term resident status. I am not currently authorised to work in the Netherlands or Belgium and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process, and I am also glad to travel roughly 25 percent of the time as the role describes.

I would welcome the opportunity to discuss how I could contribute to NewRocket's AI Foundry team.

Regards,
Prabhavit Gupta
