Dear Hiring Manager,

I am applying for the Technical Product Manager role in Limassol.

At FlowSpace, a workspace marketplace platform, I own the product end to end: I helped take the platform from 2,000 to 4,500+ users through iterative product development, working with our developers on product logic and business logic documentation and coordinating daily between our internal team and an external delivery agency. I led a live platform migration off a legacy stack onto Next.js and Laravel, planning how each part of the system would move without taking the product down, and I built the OfficeRnD and Nexudus API integrations that connect the platform to the booking infrastructure it depends on. That combination, translating what the business and its partners need into a system that keeps running, is close to what this role asks for around Bare Metal, Kubernetes and the other managed services you support.

I also use AI tools daily in product and engineering work, from requirements documentation to prototyping, so the day-to-day workflow you describe is already how I operate.

I hold Italian EU long-term resident status. I am not currently authorised to work in Cyprus and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Limassol and complete that process.

Regards,
Prabhavit Gupta
