Dear Novo Nordisk Hiring Team,

I am applying for the Advanced AI Engineer role in AI Reinvent & Engineering, based in Ballerup.

At UltraStrategy I built a CV parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data with Affinda and assesses how relevant the candidate is for specific role types, the result reaches the frontend, and the pipeline then generates a standardised Ultra CV. The extraction and scoring logic ran on n8n and Eden AI, and the generation step used the Claude API, a pipeline that moves between conventional data extraction and retrieval-grounded generation depending on what each step needs.

At FlowSpace I built and operate support AI agents that answer customer queries from live platform data and escalate to a human whenever confidence is low, and an AI listing bot that turns a workspace brochure in any format into a drafted listing with a human in the loop, now responsible for 900+ listings. I also drove the automated migration of the platform onto Next.js and Laravel while it stayed live, growing it from 2,000 to 4,500+ users.

I have a working knowledge of statistical and machine learning foundations, three years of hands on delivery across eight European companies, and Claude Code as part of my daily development workflow.

I hold Italian EU long term resident status. Denmark is excluded from the EU long term residence mobility route, so I am not currently authorised to work there and would need the applicable employer side permit or sponsorship process. I am ready to relocate and complete that process, and would welcome the chance to discuss the role.

Regards,
Prabhavit Gupta
