Dear Omada by TP-Link Italia team,

I am writing to apply for the Business Networks Support Engineer role in Cernusco sul Naviglio. I want to be upfront: I do not hold a networking certification such as CCNA or CCNP, and my three years of professional experience are in software and platform integration rather than enterprise network engineering. What I bring is customer-facing troubleshooting, API integration and debugging across live production systems, which I believe transfers well to the technical ownership this role asks for.

At FlowSpace, a live workspace marketplace, I built and maintain support AI agents that answer customer queries directly from live platform data and escalate to a person whenever confidence is low, so I am used to owning a case end to end and knowing when to hand it off. In the same role I integrated the OfficeRnD and Nexudus APIs for automated bookings and drove the data migration off a legacy stack onto Next.js and Laravel while the product stayed live, work that involved constant root cause analysis when data flows between systems broke.

At Clubee, I integrated the Clubee API across the frontend and ran unit testing and quality assurance on new features, which sharpened my habit of isolating a bug methodically before proposing a fix, the same discipline CLI diagnostics and log analysis demand.

I am a fast learner with new tools and comfortable communicating technical detail clearly to both customers and engineering teams, in English and in Italian. I am based in Venice, authorised to work in Italy without sponsorship, and available for the Cernusco sul Naviglio location. I would welcome the chance to discuss how I could contribute.

Kind regards,
Prabhavit Gupta
