Dear Oplane Hiring Team,

I am writing to apply for the Forward Deployed Engineer role in Malmo. The job description matches the kind of work I have actually been doing: going into an environment I do not control, making something fit it, and building what is missing along the way.

At FlowSpace, I took over a live workspace marketplace and was responsible for migrating its data off a legacy stack onto Next.js and Laravel while the product stayed live and users kept using it. I mapped the old structure to the new one and chose the migration path per entity, API endpoints where they held up under load and CSV exports where they did not, then drove the cutover for each entity without visible downtime for the 2,000 to 4,500 plus users on the platform. That is the same shape of problem this role describes: nobody hands you a clean environment, you build the path through the messy one in front of you.

At Urlink, I worked as project manager and AI assisted developer, building the platform and its logic with AI assisted development and implementing automations driven directly by client requirements, which meant holding the client's need and the platform's constraints at the same time and knowing when a request should stay bespoke and when it should become something reusable.

I use coding agents seriously in my own work, including the Claude API and Claude Code across FlowSpace's listing bot and support agents, and I am fluent in Python and TypeScript, which is where you said your work happens.

I hold an Italian EU Long Term Residence Permit. I am not currently authorised to work in Sweden without the applicable employer side permit or sponsorship process, and I am ready to relocate to Malmo and complete that process for the on site role.

Regards,
Prabhavit Gupta
